ABSTRACT

Aminothiazole compounds with N-containing cycloalkyl at the 2-amino position which are represented by the Formula (I), or a pharmaceutically acceptable prodrug of said compound, pharmaceutically active metabolite or pharmaceutically acceptable salt of said compound, or metabolite thereof, modulate and/or inhibit the cell proliferation and activity of protein kinases.

The invention is also directed to the therapeutic or prophylactic use of pharmaceutical compositions containing such compounds, and to methods of treating malignancies and other disorders by administering effective amounts of such compounds.
